

# THREE-DIMENSIONAL FORCE SYSTEMS

## Today's Objectives:

Students will be able to solve 3-D particle equilibrium problems by

- a) Drawing a 3-D free body diagram, and,
- b) Applying the three scalar equations (based on one vector equation) of equilibrium.

## QUIZ

1. Particle P is in equilibrium with five (5) forces acting on it in 3-D space. How many scalar equations of equilibrium can be written for point P?

- A) 2            B) 3            C) 4  
D) 5            E) 6

2. In 3-D, when a particle is in equilibrium, which of the following equations apply?

A)  $(\Sigma F_x) \mathbf{i} + (\Sigma F_y) \mathbf{j} + (\Sigma F_z) \mathbf{k} = 0$

B)  $\Sigma \mathbf{F} = 0$

C)  $\Sigma F_x = \Sigma F_y = \Sigma F_z = 0$

D) All of the above.

E) None of the above.

# APPLICATIONS

The weights of the electromagnet and the loads are given.

Can you determine the forces in the chains?

# APPLICATIONS

(continued)

The shear leg derrick is to be designed to lift a maximum of  $500\text{ kg}$  of fish.

What is the effect of different offset distances on the forces in the cable and derrick legs?

## THE EQUATIONS OF 3-D EQUILIBRIUM

When a particle is in equilibrium, the vector sum of all the forces acting on it must be zero ( $\Sigma \mathbf{F} = 0$ ).

This equation can be written in terms of its x, y and z components. This form is written as follows.

$$(\Sigma F_x) \mathbf{i} + (\Sigma F_y) \mathbf{j} + (\Sigma F_z) \mathbf{k} = 0$$

This vector equation will be satisfied only when

$$\Sigma F_x = 0$$

$$\Sigma F_y = 0$$

$$\Sigma F_z = 0$$

These equations are the three scalar equations of equilibrium. They are valid at any point in equilibrium and allow you to solve for up to three unknowns.

## EXAMPLE #1

**Given:**  $F_1$ ,  $F_2$  and  $F_3$ .

**Find:** The force  $F$  required to keep particle O in equilibrium.

**Plan:**

- 1) Draw a FBD of particle O.
- 2) Write the unknown force as

$$\mathbf{F} = \{F_x \mathbf{i} + F_y \mathbf{j} + F_z \mathbf{k}\} \text{ N}$$

- 3) Write  $F_1$ ,  $F_2$  and  $F_3$  in Cartesian vector form.
- 4) Apply the three equilibrium equations to solve for the three unknowns  $F_x$ ,  $F_y$ , and  $F_z$ .

## EXAMPLE #1 (continued)

$$\mathbf{F}_1 = \{400 \mathbf{j}\} \text{N}$$

$$\mathbf{F}_2 = \{-800 \mathbf{k}\} \text{N}$$

$$\mathbf{F}_3 = F_3 (\mathbf{r}_B / r_B)$$

$$= 700 \text{ N} [(-2 \mathbf{i} - 3 \mathbf{j} + 6 \mathbf{k}) / (2^2 + 3^2 + 6^2)^{1/2}]$$

$$= \{-200 \mathbf{i} - 300 \mathbf{j} + 600 \mathbf{k}\} \text{ N}$$

## EXAMPLE #1

(continued)

Equating the respective  $i, j, k$  components to zero, we have

$$\Sigma F_x = -200 + F_x = 0 ; \quad \text{solving gives } F_x = 200 \text{ N}$$

$$\Sigma F_y = 400 - 300 + F_y = 0 ; \quad \text{solving gives } F_y = -100 \text{ N}$$

$$\Sigma F_z = -800 + 600 + F_z = 0 ; \quad \text{solving gives } F_z = 200 \text{ N}$$

Thus,  $\mathbf{F} = \{200 \mathbf{i} - 100 \mathbf{j} + 200 \mathbf{k}\} \text{ N}$

Using this force vector, you can determine the force's magnitude and coordinate direction angles as needed.

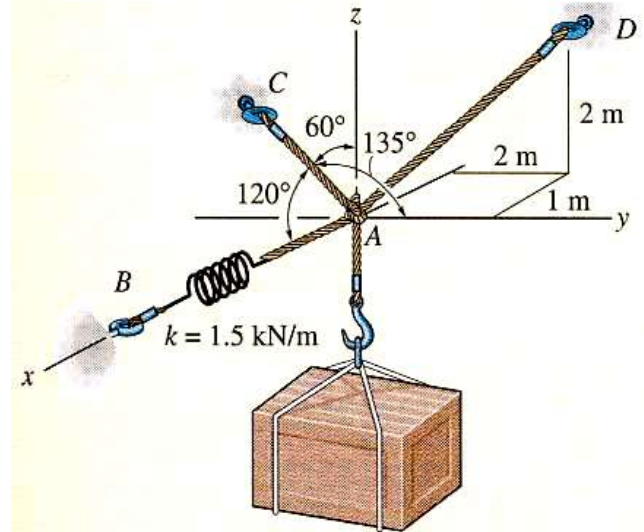

## EXAMPLE #2

**Given:** A 100 Kg crate, as shown, is supported by three cords. One cord has a spring in it.

**Find:** Tension in cords AC and AD and the stretch of the spring.

**Plan:**

- 1) Draw a free body diagram of Point A. Let the unknown force magnitudes be  $F_B$ ,  $F_C$ ,  $F_D$ .
- 2) Represent each force in the Cartesian vector form.
- 3) Apply equilibrium equations to solve for the three unknowns.
- 4) Find the spring stretch using  $F_B = K * S$ .

## EXAMPLE #2 (continued)

FBD at A

$$\mathbf{F}_B = F_B \mathbf{i}$$

$$\begin{aligned}\mathbf{F}_C &= F_C \mathbf{N} (\cos 120^\circ \mathbf{i} + \cos 135^\circ \mathbf{j} + \cos 60^\circ \mathbf{k}) \\ &= \{-0.5 F_C \mathbf{i} - 0.707 F_C \mathbf{j} + 0.5 F_C \mathbf{k}\} \mathbf{N}\end{aligned}$$

$$\begin{aligned}\mathbf{F}_D &= F_D (\mathbf{r}_{AD}/r_{AD}) \\ &= F_D \mathbf{N} [(-1 \mathbf{i} + 2 \mathbf{j} + 2 \mathbf{k}) / (1^2 + 2^2 + 2^2)^{1/2}] \\ &= \{-0.3333 F_D \mathbf{i} + 0.667 F_D \mathbf{j} + 0.667 F_D \mathbf{k}\} \mathbf{N}\end{aligned}$$

## EXAMPLE #2 (continued)

The weight is  $\mathbf{W} = (-mg) \mathbf{k} = (-100 \text{ kg} * 9.81 \text{ m/sec}^2) \mathbf{k} = \{-981 \mathbf{k}\} \text{ N}$

Now equate the respective  $i$ ,  $j$ ,  $k$  components to zero.

$$\sum F_x = F_B - 0.5F_C - 0.333F_D = 0$$

$$\sum F_y = -0.707 F_C + 0.667 F_D = 0$$

$$\sum F_z = 0.5 F_C + 0.667 F_D - 981 \text{ N} = 0$$

Solving the three simultaneous equations yields

$$F_C = 813 \text{ N}$$

$$F_D = 862 \text{ N}$$

$$F_B = 693.7 \text{ N}$$

The spring stretch is (from  $F = k * s$ )

$$s = F_B / k = 693.7 \text{ N} / 1500 \text{ N/m} = 0.462 \text{ m}$$

## Solving using Matrix Methods

If  $\mathbf{AX} = \mathbf{B}$ ,  $\mathbf{X} = \mathbf{A}^{-1}\mathbf{B}$ , where  $\mathbf{A}$ ,  $\mathbf{X}$ , and  $\mathbf{B}$  are matrices.

Need to create solving structure

$$F_B - 0.5F_C - 0.333F_D = 0$$

$$0.707 F_C + 0.667 F_D = 0$$

$$0.5 F_C + 0.667 F_D - 981 = 0$$

$$F_B - 0.5 F_C - 0.333 F_D = 0$$

$$0 F_B + 0.707 F_C + 0.667 F_D = 0$$

$$0 F_B + 0.5 F_C + 0.667 F_D = 981$$

$$\begin{bmatrix} 1 & -0.5 & -0.333 \\ 0 & 0.707 & 0.667 \\ 0 & 0.5 & 0.667 \end{bmatrix} \begin{bmatrix} F_B \\ F_C \\ F_D \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 981 \end{bmatrix}$$

$F_B$	$F_C$	$F_D$	
1	-0.5	-0.333	0
0	0.707	0.667	0
0	0.5	0.667	981

## CONCEPT QUIZ

1. In 3-D, when you know the direction of a force but not its magnitude, how many unknowns corresponding to that force remain?  
A) One      B) Two      C) Three      D) Four
2. If a particle has 3-D forces acting on it and is in static equilibrium, the components of the resultant force ( $\Sigma F_x$ ,  $\Sigma F_y$ , and  $\Sigma F_z$ ) \_\_\_\_ .  
A) have to sum to zero, e.g.,  $-5 \mathbf{i} + 3 \mathbf{j} + 2 \mathbf{k}$   
B) have to equal zero, e.g.,  $0 \mathbf{i} + 0 \mathbf{j} + 0 \mathbf{k}$   
C) have to be positive, e.g.,  $5 \mathbf{i} + 5 \mathbf{j} + 5 \mathbf{k}$   
D) have to be negative, e.g.,  $-5 \mathbf{i} - 5 \mathbf{j} - 5 \mathbf{k}$

## GROUP PROBLEM SOLVING

**Given:** A 150 Kg plate, as shown, is supported by three cables and is in equilibrium.

**Find:** Tension in each of the cables.

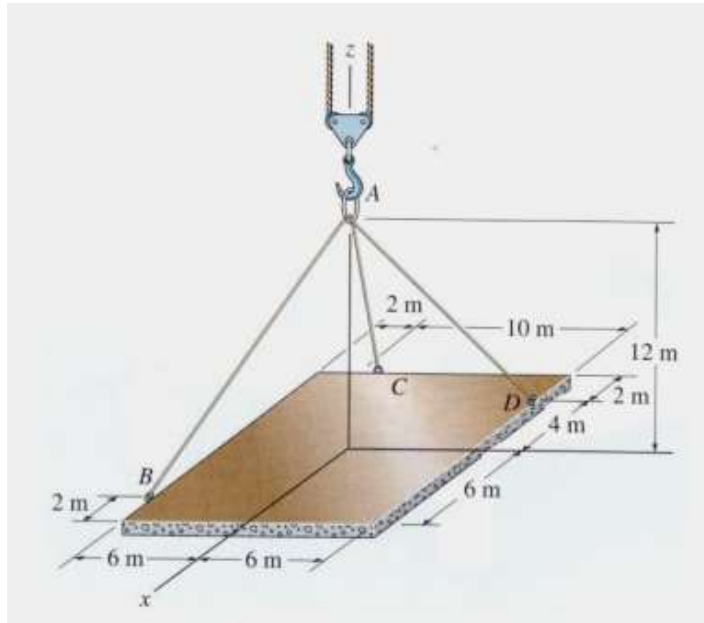

### Plan:

- 1) Draw a free body diagram of Point A. Let the unknown force magnitudes be  $F_B$ ,  $F_C$ ,  $F_D$ .
- 2) Represent each force in the Cartesian vector form.
- 3) Apply equilibrium equations to solve for the three unknowns.

## GROUP PROBLEM SOLVING (continued)

FBD of Point A:

$$\begin{aligned} W &= \text{load or weight of plate} = (\text{mass})(\text{gravity}) \\ &= 150 (9.81) \mathbf{k} = 1472 \mathbf{k} \text{ N} \end{aligned}$$

$$F_B = F_B (\mathbf{r}_{AB}/r_{AB}) = F_B \text{ N } (4 \mathbf{i} - 6 \mathbf{j} - 12 \mathbf{k})\text{m}/(14 \text{ m})$$

$$F_C = F_C (\mathbf{r}_{AC}/r_{AC}) = F_C (-6 \mathbf{i} - 4 \mathbf{j} - 12 \mathbf{k})\text{m}/(14 \text{ m})$$

$$F_D = F_D (\mathbf{r}_{AD}/r_{AD}) = F_D (-4 \mathbf{i} + 6 \mathbf{j} - 12 \mathbf{k})\text{m}/(14 \text{ m})$$

## GROUP PROBLEM SOLVING (continued)

The particle A is in equilibrium, hence

$$F_B + F_C + F_D + W = 0$$

Now equate the respective *i*, *j*, *k* components to zero (i.e., apply the three scalar equations of equilibrium).

$$\sum F_x = (4/14)F_B - (6/14)F_C - (4/14)F_D = 0$$

$$\sum F_y = (-6/14)F_B - (4/14)F_C + (6/14)F_D = 0$$

$$\sum F_z = (-12/14)F_B - (12/14)F_C - (12/14)F_D + 1472 = 0$$

Solving the three simultaneous equations gives

$$F_B = 858 \text{ N}$$

$$F_C = 0 \text{ N}$$

$$F_D = 858 \text{ N}$$

## QUIZ

1. Four forces act at point A and point A is in equilibrium. Select the correct force vector  $P$ .

- A)  $\{-20 \mathbf{i} + 10 \mathbf{j} - 10 \mathbf{k}\} \text{lb}$
- B)  $\{-10 \mathbf{i} - 20 \mathbf{j} - 10 \mathbf{k}\} \text{lb}$
- C)  $\{+ 20 \mathbf{i} - 10 \mathbf{j} - 10 \mathbf{k}\} \text{lb}$
- D) None of the above.

2. In 3-D, when you don't know the direction or the magnitude of a force, how many unknowns do you have corresponding to that force?

- A) One    B) Two    C) Three    D) Four
