

Magnitude & Direction Notation

- Common
- Use Pythagorean Theorem & trig
- Direction means with respect to some convention
 - 0° (positive x direction) in x-y axes
 - wrt nearest axis on maps (N, E, W, S)

$$\vec{A} = -6\hat{i} + 5\hat{j}$$

$$A = |\vec{A}| = \sqrt{A_x^2 + A_y^2} = \sqrt{(-6)^2 + 5^2} = 7.81$$

$$\varphi = \tan^{-1}(\text{opp}/\text{adj}) = \tan^{-1}(5/|-6|) = 39.8^\circ$$

$$\text{direction: } \theta = 180^\circ - \varphi = 140.2^\circ$$
