

Undergraduate

Mackenzie Presbyterian University (UPM) undergraduate courses offer high quality educational standards. This evaluation was conducted by both the Ministry of Education and independent sources. Ranking Universitário Folha* classified UPM as the best non-public university in the state of São Paulo. Guia do Estudante** assigned "excellent" or "good" to all of our undergraduate courses.

The articulation between practical experiences and theoretical reflections are a distinctive feature in the pedagogical projects from the undergraduate courses at UPM. They place the student in an active role in the teaching-learning process. Investments in laboratorial areas are permanent in Mackenzie Presbyterian Institute. They make it possible for students to have similar experiences to the ones in professional settings.

* Ranking list proposed by a famous newspaper, Folha de S. Paulo.

Social recognition

Besides the good evaluations by the government and independent sources, Mackenzie undergraduate courses are also well recognized by professional associations and the civil society. A good example of that is the seal, 'OAB Recommended', given to the best national Law Courses by the Order of Attorneys of Brazil – OAB (organization that regulates and certifies the profession in Brazil).

Internationalization

Brazilian economy has been facing a strong internationalization process during the last decades. That resulted in a big impact in many sectors of our society. Mackenzie undergraduate courses make an effort to insert their students in this movement through international exchange programs that not only send and receive students, but also offer a double degree. The university participates actively not only in governmental programs such as 'Science without Borders' that promotes the exchange of around 10,000 Brazilians a year, but also in actions that are funded by private companies or institutions (like Top China Santander).

- Technology in Human Resources Administration
- Technology in Marketing

Graduate Programs: Master and Doctoral Degrees

In face of all the transformations that happened in Brazil in the last two decades, the university became a fundamental part for the development of the country. The future of any university depends on the production and transmission of new knowledge to society by means of research. Conscious that scientific knowledge will never happen without a distinguished graduate program, Mackenzie Presbyterian University has made investments in its eleven graduation programs. Eight of them can offer doctoral degrees and all of them are able to offer master degrees (two of them are professional master courses). The remarkable qualifications of the teaching staff, installations and library standards have granted excellent evaluations from governmental organs, such as CAPES*.

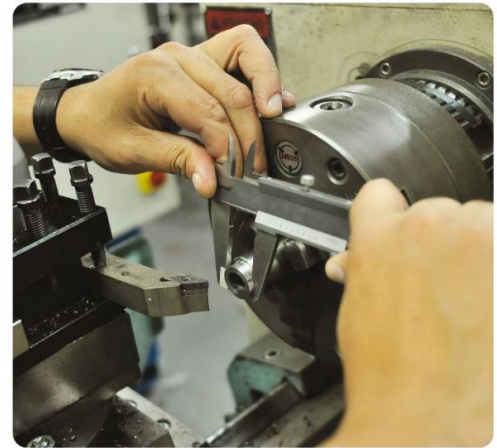

Researchers formation funding

Mackenzie Presbyterian University understands that it is necessary to create objective conditions to the development of its researchers. For this reason, it started to offer their PhD students full scholarships. In addition, the PhD student can count on sandwich scholarships funded by different institutions such as CAPES, Santander international mobility scholarships and also its own funding program called Mack-Pesquisa, that is also available for its professors.

International Events

Great emphasis has been given to hold international relevant scientific events and to receive national and international highly scientific, academic or cultural guest lecturers. That includes names such as Orhan Pamuk, Nobel Prize in Literature, and Robert Shapiro, politics expert.
